Profile

Backend Developer with 3+ years of experience (including freelance work since 2023) building secure, scalable web applications and RESTful APIs with PHP, Laravel and MySQL. Currently Backend Developer at Data Pulse, with production work across travel booking, e-commerce marketplace, shipping and classified-ads platforms. Experienced in integrating third-party services such as payment gateways, flight and hotel booking systems, shipping carriers and accounting software, with a focus on secure authentication, real-time features, background processing, automated testing and clean, maintainable code.

Education

Bachelor of Computer Science (Artificial Intelligence) 2020 – 2024
Mansoura University Mansoura, Egypt
Graduation project: Go Smart, a travel guide and driver-booking app for Egypt (grade A).

Backend Developer May 2026 – Present
Data Pulse Egypt
Full-time, on-site position.

Backend Developer Jun 2025 – Jun 2026
morb7 Mansoura, Egypt
Full-time position.

Freelance Backend Developer 2023 – Present
Self-employed Cairo, Egypt
Freelance, remote position.

Skills

- PHP
- Laravel
- MySQL
- REST APIs
- JWT & Sanctum
- Laravel Reverb (WebSockets)
- Queues & Background Jobs
- Payment Gateways
- Third-party API Integration
- PHPUnit & Postman
- Git & GitHub
- OOP & SOLID
- Design Patterns
- MVC / HMVC
- Microservices
- Problem-Solving
- Effective Communication
- Time Management

Projects

PlanGo
- Bilingual (Arabic/English) travel booking platform with a customer app, an admin dashboard and a travel provider portal.

- Smart package recommendation engine that builds a complete, priced trip (flights, hotels, transfers, daily program) from user preferences using weighted multi-criteria scoring of destinations.
- Integrated NDC airline flights, Zentrum hotels and Paymob payments; built with Laravel 12, MySQL, JWT, Laravel Reverb and PHPUnit.

Mogwharat
- Multi-vendor gold and jewelry marketplace connecting Saudi jewelry brands with customers, with a storefront, merchant portal and admin dashboard in Arabic and English.
- Live gold-based pricing per karat from metals.dev, plus merchant subscriptions, influencer commissions, used-gold buy-back and paid ad placements.
- Integrated MyFatoorah payments, SMSA shipping and Firebase notifications; built with Laravel 12, MySQL, JWT and Laravel Reverb.

Jahzha
- Saudi shipping aggregator and B2B logistics broker connecting individuals and businesses with 100+ local and international carriers.
- Integrated shipping carrier APIs for live rates, shipment creation, shipping labels and tracking updates.
- Built a dynamic monthly invoicing system for postpaid companies: an invoice opens with the first shipment of the month, collects all shipments until month end, and locks new shipments until it is paid.
- Built the company dashboard with roles and permissions, and the Jahzha for Business website.

Afaq Al-Syola
- Saudi classified-ads marketplace with an escrow trade brokerage service that holds the buyer's payment until the deal is completed, serving the website and iOS/Android apps.
- Built and grew the backend over a year: ads, brokerage requests, fees and commissions, and seller payouts after buyer confirmation.
- Integrated the platform with Jahzha via API for shipping brokered deals, and migrated the legacy production database into the new system.
